Introduction to the Comprehensive Assessment disclosure templates

This document contains final disclosure of the results of the Comprehensive Assessment for DSK Bank EAD.

The template contains the bank's overall Comprehensive Assessment outcome, as well as further detail on Asset Quality Review (AQR) results.

This page provides detail on how to read the templates, and contains important caveats to consider within the context of final results

Bank-specific notes

Bank-specific note for fields E10-E18

Negative changes in coverage ratio displayed here are used to offset potential provisioning shortfalls identified during collective provisioning assessment for remaining exposures within the same portfolio. Total stock of provisions per portfolio does not decrease as per AQR methodology.

| Section | Contents | Key fields | Notes |
| A. Main information on the bank before the Comprehensive Assessment (end-2018) | This section contains information on the size, performance and starting point capital holding of the bank as at year-end 2018 | e A6 Starting point CET1% - bank provided starting point for any adjustments following the Comprehensive Assessment | |
| B. Main results of the Comprehensive Assessment | This key section of the disclosure template contains the main results of the Comprehensive Assessment | Key fields discussed in more detail below | |
| C. Major capital measures impacting Tier 1 eligible capital, from 1 January 2019 to 30 June 2019 | This section displays major capital market activity affecting Tier 1 eligible capital | | Section C should be read as informational only. Figures here do not feed into the final CET1% results as detailed in section B, nor do they mitigate the bank's disclosed capital shortfall (B11) For banks with a capital shortfall, this information will be taken into account during the capital planning phase that follows disclosure of Comprehensive Assessment results |
| D. Matrix Breakdown of AQR Result | This section gives workblock specific AQR results | D.A - D.F provides AQR results broken down by asset segment, and by AQR workblock D.G - D.I provides the results of the non-derivative exposures review D20 is the gross impact of the AQR before offsetting D24 is the net total impact of the AQR | The selection of asset classes for portfolio review was based on an approach aimed at identifying those portfolios with the highest risk of misclassification and misvaluation. Therefore, extrapolation of results to the non-selected portfolios would be incorrect from a statistical stand-point In the AQR exercise the resulting increase in provisions (from a supervisory perspective) are translated into a change in CET1 Items D1 to D20 are before offsetting impacts such as asset protection and taxes |
| E. Matrix Breakdown of Asset Quality Indicators | The section provides asset quality indicators (NPE levels and coverage ratio), broken down by asset segment | E1 shows the evolution of NPE levels for portfolios selected in Phase 1 E10 shows the evolution of coverage ratios for portfolios selected in Phase 1 | Information reported only for portfolios subject to detailed review in AQR, i.e. those selected in Phase 1 of the AQR Figures presented should not be interpreted as accounting figures |
| F. Leverage ratio impact of the Comprehensive Assessment | This shows the change in the leverage ratio from the AQR | ₹ | Leverage ratios are not binding based on the current regulatory framework, are displayed for information purposes only and have no impact on the capital shortfall Due to the 'static balance sheet' assumption used as part of the Stress Test, the leverage ratio might be misleading for the Stress Test |

2. Detailed AQR Results

D. Matrix Breakdown of AQR Result (B2)

Note:

- The selection of asset classes for portfolio review was based on an approach aimed at identifying portfolios with the highest risk of misclassification. Therefore, extrapolation of results to the non-selected portfolios would not be appropriate.
- The columns D.C to D .F include (but are not limited to) any impacts on provisioning associated with the reclassification (from a supervisory perspective) of exposures across stages of the IFRS 9 impairment model.
- In the AQR exercise the resulting increase in provisions (from a supervisory perspective) are translated into a change in CET1 capital.
- Items D1 to D20 are before offsetting impacts such as asset protection, taxes and IFRS9 transitional arrangements. • Basis points are calculated using total risk exposure from Section A4.
- For the interpretation of the detailed results the interested reader may refer to the AQR manual outlining the methodology: https://www.bankingsupervision.europa.eu/ecb/pub/pdf/ssm.assetqualityreviewmanual201806.en.pdf

F. LEVERAGE RATIO IMPACT OF THE COMPREHENSIVE ASSESSMENT

- Note that the leverage ratio is calculated based on the COMMISSION DELEGATED REGULATION (EU) 2015/62 of 10 October 2014 amending Regulation (EU) No 575/2013 of the European Parliament and of the Council
- It is not binding based on the current regulatory framework, is displayed for information purposes only and has no impact on the capital shortfall (B11). • As the constant balance sheet assumption, which is applied in the Stress Test, might be misleading for the leverage ratio, the ratio is displayed for AQR only.
