Section descriptions

Section	Contents	Key fields	Notes
A. Main information on the bank before the Comprehensive Assessment (end-2014)	This section contains information on the size, performance and starting point capital holding of the bank as at year-end 2014	A6 Starting point CET1% - bank provided starting point for any adjustments following the Comprehensive Assessment	- Numbers in this section are provided primarily for transparency purposes and should not be used for comparisons to other sections/sheets. As an example, the NPE ratio exhibited in this section applies across all segments and all bank portfolios, and as such does not provide a like for like comparison with the NPE ratio data displayed in section E (which relates only to portfolios selected in Phase 1 of the AQR)
B. Main results of the Comprehensive Assessment	This key section of the disclosure template contains the main results of the Comprehensive Assessment	Key fields discussed in more detail below	- Banks have 6 months to recapitalise any shortfall resulting from the AQR and Stress Test baseline scenario, and 9 months to recapitalise any shortfall resulting from the Stress Test adverse scenario
C. Major capital measures impacting Tier 1 eligible capital, from 1 January 2015 to 30 September 2015	This section displays major capital market activity affecting Tier 1 eligible capital		- Section C should be read as informational only. Figures here do not feed into the final CET1% results as detailed in section B, nor do they mitigate the bank's disclosed capital shortfall (B11) - For banks with a capital shortfall, this information will be taken into account during the capital planning phase that follows disclosure of Comprehensive Assessment results
D. Matrix Breakdown of AQR Result	This section gives workblock specific AQR results	D.A - D.F provides AQR results broken down by asset segment, and by AQR workblock D.G - D.I provides the results of the Level 3 non-derivative exposures review D20 is the gross impact of the AQR before offsetting D21 provides impact of insurance protection D22 provides the tax impact D23 shows the net total impact of the AQR	- The selection of asset classes for portfolio review was based on an approach aimed at identifying those portfolios with the highest risk of misclassification and misvaluation. Therefore, extrapolation of results to the non-selected portfolios would be incorrect from a statistical stand-point - In the AQR exercise the resulting increase in provisions (from a supervisory perspective) are translated into a change in CET1 - Items D1 to D21 are before offsetting impacts such as asset protection and taxes
E. Matrix Breakdown of Asset Quality Indicators	The section provides asset quality indicators (NPE levels and coverage ratio), broken down by asset segment	- E1 shows the evolution of NPE levels for portfolios selected in Phase 1 - E10 shows the evolution of coverage ratios for portfolios selected in Phase 1	- Information reported only for portfolios subject to detailed review in AQR, i.e. those selected in Phase 1 of the AQR - Figures presented should not be interpreted as accounting figures - The asset quality indicators are based on EBA's simplified definition of NPE - While the application of this definition constitutes an important step forward in terms of harmonisation across the euro area banking sector, the degree of harmonisation reached is not complete due to factors such as different materiality thresholds across Member States. However, a solid basis of consistency has been implemented for the Comprehensive Assessment, implying a very significant improvement in comparability across banks and jurisdictions - Leverage ratios are currently not binding, are displayed for information purposes only and have no impact on the capital shortfall - Due to the 'static balance sheet' assumption used as part of the Stress Test, the leverage ratio might be misleading for the Stress Tests and is therefore displayed for AQR only
F. Leverage ratio impact of the Comprehensive Assessment	This shows the change in the leverage ratio from the AQR

2. Detailed AQR Results

D. Matrix Breakdown of AQR Result (B2)

Note:

- The selection of asset classes for portfolio review was based on an approach aimed at identifying those portfolios with the highest risk of misclassification. Therefore, extrapolation of results to the non-selected portfolios would be incorrect.
- The columns D .C to D .F include (but are not limited to) any impacts on provisioning associated with the reclassification of performing to non-performing exposure.
- In the AQR exercise the resulting increase in provisions (from a supervisory perspective) are translated into a change in CET1.
- Items D1 to D21 are before offsetting impacts such as asset protection and taxes.
- Basis points are calculated using total risk exposure from Section A4
- For the interpretation of the detailed results the interested reader may refer to the AQR manual outlining the methodology.

E. Matrix Breakdown of Asset Quality Indicators

- The selection of asset classes for portfolio review was based on an approach aimed at identifying those portfolios with the highest risk of misclassification. Therefore, extrapolation of results to the non-selected portfolios would be incorrect from a statistical stand-point.
- The asset quality indicators are based on EBA's simplified definition of NPE. As date requirements include 2013 data it is necessary to stick with this simplified definition in order to ensure cross-time consistency.
- All parties involved made significant efforts to increase the degree of harmonisation of the NPE definition and its application.
- While the application of this definition constitutes a very important leap forward in terms of harmonisation across the euro area banking sector, the degree of harmonisation reached is not completely perfect due to factors such as different materiality thresholds across Member States. However, a solid basis of consistency has been implemented for the comprehensive assessment, implying a very significant improvement in comparability across banks from different jurisdictions.
- The figures presented should not be understood as accounting figures.

F. LEVERAGE RATIO IMPACT OF THE COMPREHENSIVE ASSESSMENT

Explanatory Note:

- Note that the leverage ratio is calculated based on the COMMISSION DELEGATED REGULATION (EU) 2015/62 of 10 October 2014 amending Regulation (EU) No 575/2013 of the European Parliament and of the Council
- It is currently not binding, is displayed for information purposes only and has no impact on the capital shortfall (B11).
- As the constant balance sheet assumption, which is applied in the Stress Test, might be misleading for the leverage ratio, the ratio is displayed for AQR only.

F1	Leverage Ratio at year end 2014 <i>Please refer to Definitions and Explanations sheet</i> F1 = A9	%	6.94%

D.I	Adjustments on CET1 before offsetting impact	Amount of adjustments resulting from: - CVA Challenger model (D11). - the different components of the fair value exposures review (D13-D19), as well as the fair value review as a whole (D12) .
D10	Additional information on portfolios with largest adjustments accounting for (at least) 30% of total banking book AQR adjustment:	This breakdown is omitted where the overall AQR impact (B2) is less than 10 basis points CET1 and single rows are omitted where they have an impact of less than 1 basis point CET1. Note this adjustment is already reflected in the asset class break down of D1 to D9 and displayed here only on a more granular level.
D11	CVA	Adjustments resulting from CVA challenger model. CVA see Article 383 CRR CVA, calculated as the market loss-given-default multiplied by the sum of expected losses at each point in time. The expected loss at each point in time i is calculated as the product of the PD factor at that point in time and the Exposure factor at that point in time
D12	Adjustments to fair value assets in the banking and trading book	Split of the aggregated adjustment from the fair value review, excluding the adjustment to CVA (D11)
D13	Non derivative exposures review	This includes changes in scope of exposure following PP&A. Note this includes accrual accounted real estate positions and portfolios accounted at cost.

D22	Offsetting tax impact	The offsetting tax impact includes the assumed creation of DTAs, which accounts for limitations imposed by accounting rules. Appropriate CRRIV DTA deductions are made for any tax offsets.
D23	Net total impact of AQR results on CET1	Net amount of the aggregated CET1 adjustment based on the AQR after offsetting impact of risk protection and tax (negative number). Sums the impact from D20, D21, D22, and incorporates the effect of changing RWA.

E. Matrix Breakdown of Asset Quality Indicators		
<ul style="list-style-type: none"> • The asset quality indicators are based on EBA's simplified definition of NPE. As date requirements include 2013 data it is necessary to stick with this simplified definition in order to ensure cross-time consistency. • All parties involved made significant efforts to increase the degree of harmonisation of the NPE definition and its application. • While the application of this definition constitutes a very important leap forward in terms of harmonisation across the euro area banking sector, the degree of harmonisation reached is not completely perfect due to factors such as different materiality thresholds across Member States. However, a solid basis of consistency has been implemented for the comprehensive assessment, implying a very significant improvement in comparability across banks from different jurisdictions. • The figures presented should not be understood as accounting figures. 		
E .A	Unadjusted NPE Level year end 2014	Total NPE for all portfolios in-scope for detailed review during the AQR. Expressed as a percentage of Total Exposure for these portfolios
E .B	Changes due to the single credit file review	Exposure re-classified from performing to non-performing according to the CFR classification review.

Same exposure definition as above.</p>
E .E	Unadjusted coverage ratio of non-performing exposure, year end 2014	Specific provisions divided by non-performing exposure for portfolios in-scope for detailed review in the AQR. NB: The NPE used is that set of of exposures which were originally marked as NPE pre-AQR.
