

Introduction to the Comprehensive Assessment disclosure templates

This document contains final disclosure of the results of the Comprehensive Assessment for The Royal Bank of Scotland N.V. Specifically, the template contains the bank's overall Comprehensive Assessment result, as well as more detail on Asset Quality Review (AQR) outcomes. Further detail on the joint ECB-EBA stress tests can be found in the bank's EBA transparency template.

This page provides detail on how to read the templates, and contains important caveats to consider within the context of final results.

Section descriptions

| Section | Contents | Key fields | Notes |
|--|---|---|---|
| A. Main information on the bank before the Comprehensive Assessment (end-2013) | This section contains information on the size, performance and starting point capital holding of the bank as at year-end 2013 | A6 Starting point CET1% - bank provided starting point for any adjustments following the Comprehensive Assessment | Numbers in this section are provided primarily for transparency purposes and should not be used for comparisons to other sections/sheets. As an example, the NPE ratio exhibited in this section applies across all segments and all bank portfolios, and as such does not provide a like for like comparison with the NPE ratio data displayed in section E (which relates only to portfolios selected in Phase 1 of the AQR) |
| B. Main results of the Comprehensive Assessment | This key section of the disclosure template contains the main results of the Comprehensive Assessment | Key fields discussed in more detail below | Banks have 6 months to recapitalise any shortfall resulting from the AQR and Stress Test baseline scenario, and 9 months to recapitalise any shortfall resulting from the Stress Test adverse scenario |
| C. Major capital measures impacting Tier 1 eligible capital, from 1 January 2014 to 30 September 2014 | This section displays major capital market activity affecting Tier 1 eligible capital | | Section C should be read as informational only. Figures here do not feed into the final CET1% results as detailed in section B, nor do they mitigate the bank's disclosed capital shortfall (B11) - For banks with a capital shortfall, this information will be taken into account during the capital planning phase that follows disclosure of Comprehensive Assessment results |
| D. Matrix Breakdown of AQR Result | This section gives workblock specific AQR results | D.A - D.F provides AQR results broken down by asset segment, and by AQR workblock D.G - D.J provides the results of the Level 3 non-derivative exposures review D20 is the gross impact of the AQR before offsetting D21 provides impact of insurance protection D22 provides the tax impact D23 shows the net total impact of the AQR | The selection of asset classes for portfolio review was based on an approach aimed at identifying those portfolios with the highest risk of misclassification and misvaluation. Therefore, extrapolation of results to the non-selected portfolios would be incorrect from a statistical stand-point - In the AQR exercise the resulting increase in provisions (from a supervisory perspective) are translated into a change in CET1 - Items D1 to D21 are before offsetting impacts such as asset protection and taxes |
| E. Matrix Breakdown of Asset Quality Indicators | The section provides asset quality indicators (NPE levels and coverage ratio), broken down by asset segment | E1 shows the evolution of NPE levels for portfolios selected in Phase 1 E10 shows the evolution of coverage ratios for portfolios selected in Phase 1 | Information reported only for portfolios subject to detailed review in AQR, i.e. those selected in Phase 1 of the AQR Figures presented should not be interpreted as accounting figures The asset quality indicators are based on EBA's simplified definition of NPE - While the application of this definition constitutes an important step forward in terms of harmonisation across the euro area banking sector, the degree of harmonisation reached is not complete due to factors such as different materiality thresholds across Member States. However, a solid basis of consistency has been implemented for the Comprehensive Assessment, implying a very significant improvement in comparability across banks and jurisdictions |
| F. Leverage ratio impact of the Comprehensive Assessment | This shows the change in the leverage ratio from the AQR | | Leverage ratios are currently not binding, are displayed for information purposes only and have no impact on the capital shortfall - Due to the 'static balance sheet' assumption used as part of the Stress Test, the leverage ratio might be misleading for the Stress Tests and is therefore displayed for AQR only |

For illustrative purposes only

B1 - the CET1 ratio as at 31 December 2013 is provided by the bank, and acts as the starting point against which Comprehensive Assessment impact is measured
Note that CET1 is defined in accordance with CRDIV/CRR applicable as of 1 January 2014

B2 - sourced from D23, the net AQR impact after tax and risk protection netting effects

B3 = B1 + B2

B4 = the delta between the AQR adjusted CET1% and the baseline scenario CET1%, in the year where capital level vs threshold (8%) is the lowest

Note - this information comes from the EBA transparency templates. The key fields in these templates are the baseline figures in the "Capital" sheet, section C.1

B5 = B3 + B4 (note the starting point for this adjustment is the AQR adjusted CET1%)

B6 = the delta between the AQR adjusted CET1% and the adverse scenario CET1%, in the year where capital level vs threshold (5.5%) is the lowest

Note - this information comes from the EBA transparency templates. The key fields in these templates are the adverse figures in the "Capital" sheet, section C.1

B7 = B3 + B6 (note the starting point for this adjustment is the AQR adjusted CET1%)

2. Detailed AQR Results

D. Matrix Breakdown of AQR Result (B2)

Note:

- The selection of asset classes for portfolio review was based on an approach aimed at identifying those portfolios with the highest risk of misclassification. Therefore, extrapolation of results to the non-selected portfolios would be incorrect.
- The columns D. C to D .F include (but are not limited to) any impacts on provisioning associated with the reclassification of performing to non-performing exposure.
- In the AQR exercise the resulting increase in provisions (from a supervisory perspective) are translated into a change in CET1.
- Items D1 to D21 are before offsetting impacts such as asset protection and taxes.
- Basis points are calculated using total risk exposure from Section A4
- For the interpretation of the detailed results the interested reader may refer to the AQR manual outlining the methodology or to the accompanying Aggregate Report where the main features of the CA exercise are reiterated. Find the AQR manual here:

E. Matrix Breakdown of Asset Quality Indicators

- The selection of asset classes for portfolio review was based on an approach aimed at identifying those portfolios with the highest risk of misclassification. Therefore, extrapolation of results to the non selected portfolios would be incorrect from a statistical stand-point.
- The asset quality indicators are based on EBA's simplified definition of NPE.
- All parties involved made significant efforts to increase the degree of harmonisation of the NPE definition and its application.
- While the application of this definition constitutes a very important leap forward in terms of harmonisation across the euro area banking sector, the degree of harmonisation reached is not completely perfect due to factors such as different materiality thresholds across Member States. However, a solid basis of consistency has been implemented for the comprehensive assessment, implying a very significant improvement in comparability across banks from different jurisdictions.
- The figures presented should not be understood as accounting figures.

F. LEVERAGE RATIO IMPACT OF THE COMPREHENSIVE ASSESSMENT

Explanatory Note:

- Note that the leverage ratio is based on the CRR Article 429 as of January 2014.
- It is currently not binding, is displayed for information purposes only and has no impact on the capital shortfall (B11).
- As the constant balance sheet assumption, which is applied in the Stress Test, might be misleading for the leverage ratio, the ratio is displayed for AQR only.

| E. Matrix Breakdown of Asset Quality Indicators | | |
| <ul style="list-style-type: none"> • The asset quality indicators are based on EBA's simplified definition of NPE. • All parties involved made significant efforts to increase the degree of harmonisation of the NPE definition and its application. • While the application of this definition constitutes a very important leap forward in terms of harmonisation across the euro area banking sector, the degree of harmonisation reached is not completely perfect due to factors such as different materiality thresholds across Member States. However, a solid basis of consistency has been implemented for the comprehensive assessment, implying a very significant improvement in comparability across banks from different jurisdictions. • The figures presented should not be understood as accounting figures. | | |
| E .A | unadjusted NPE Level year end 2013 | Total NPE for all portfolios in-scope for detailed review during the AQR. Expressed as a percentage of Total Exposure for these portfolios |

Same exposure definition as above. |
| E .E | unadjusted coverage ratio of non-performing exposure, year end 2013 | Specific provisions divided by non-performing exposure for portfolios in-scope for detailed review in the AQR. NB: The NPE used is that set of of exposures which were originally marked as NPE pre-AQR. |
